SUMMARY

A highly motivated Computer Science undergraduate passionate about leveraging technology to solve real-world problems. Committed to continuous learning and growth, with a strong drive to explore and adapt to emerging technologies.

EDUCATION

B.E. Computer Science and Engineering
College of Engineering , Guindy(Anna University)

09/2024-Present
CGPA:9.75

Higher Secondary Education
Sri Saraswathi Vidya Mandir , Karur

06/2022-04/2024
Percentage:98.67%

Secondary Education
Sri Ramakrishna Matric School, Karur

06/2020-04/2022
Percentage:98%

SKILLS

Programming Languages: C, C++, Java(Basics)

Web Technologies: Node.js, Express.js, React.js

Databases: MySQL,MongoDb

Core CS concepts: OOPS, DSA, DBMS, OS

Tools&Platforms: Git, GitHub, VS Code, Linux

Others: Design(Canva)

Team Collaboration | Communication | Adaptability | Problem solving

PROJECTS

Estate Vault – Digital Legacy Management System

01/2026-03/2026

- A full-stack MERN application that enables users to securely store sensitive digital assets including passwords, crypto keys, and documents inside an AES-256-GCM encrypted personal vault.
- Features two-step authentication combining bcrypt password verification with time-limited email OTP as a second factor.
- Implements an automated Dead Man's Switch using node-cron that monitors user inactivity and notifies nominated trustees via email when triggered.
- Includes a complete death certificate verification pipeline where nominees upload documents and admins approve or reject requests before vault access is granted.
- Follows a clean MVC architecture with role-based JWT authorization, Helmet security headers, and a persistent audit logging system.

CareRoute – Hospital Resource Management System

05/2026-06/2026

- A comprehensive MySQL-based Hospital Emergency Resource Management System that streamlines patient triage, ambulance dispatch, blood bank operations, staff scheduling, medicine inventory, and resource allocation through an integrated relational database.
- Implements transaction-safe FIFO inventory management for blood and medicine using stored procedures, ensuring atomic allocation, rollback on insufficient stock, and expiry-aware resource utilization.
- Enforces critical business rules directly at the database layer through automated triggers, constraints, row-level locking, and scheduled events to prevent scheduling conflicts, duplicate resource assignments, and maintain real-time data integrity.
- Designed using a fully normalized relational schema with stored procedures, views, and cloud deployment on Aiven MySQL, accompanied by a comprehensive validation suite verifying database integrity and workflow correctness.

INTERSHIP

Project Review System – Academic Project Management Platform

06/2026

- A full-stack MERN application that digitizes the end-to-end academic project review lifecycle including student team formation, faculty guide assignment, review panel scheduling, attendance tracking, and mark submission for a university department.
- Implements role-based JWT authentication supporting five distinct roles – student, guide, panel member, coordinator, and admin – with dynamic multi-role switching, allowing a single faculty member to act across roles within the same session.

LEADERSHIP & ACTIVITIES

- Junior Coordinator – ACM CEG Chapter (Design Domain) **2025-2026**
- Organizer – CEG Tech Forum (HR Domain) **2025-2026**
- Senior Coordinator – ACM CEG Chapter (Design Domain) **2026-Present**
- Participant in CodHer Hackathon **03/2026**

LANGUAGES

- English(Professional Proficiency)
- Tamil(Native Proficiency)
